Pauzepuzzels

Dit is geen tentamenstof!

Wat wordt er geprint?

```python
my_list = [4,8,32,3]
index_m = -1
val_m = -100000
for i in range(0, 4):
    val = my_list[i]
    if val > val_m:
        val_m = val
        index_m = i
print(index_m, val_m)
```

Wat wordt er geprint?

```python
def some_function(x):
    return x/2

def unity(fun):
    x = 0
    i = 0
    dx = 0.0001
    while i < 1:
        i += fun(x)*dx
        x += dx
    return x

result = unity(some_function)
print('result = {:.2f}'.format(result))
```
